

Dear Sirs:

I support satellite radio and oppose HR 4026.

I don't understand why the government is trying to limit my access to public information.

Local news and weather are a benefit to all who rely on these reports no matter how they are delivered to the end user.

I know satellite companies deliver the weather channel and local weather to their subscribers.

If HR 4026 continues through committees you will have to ban that information on these systems too.

Satellite radio can and does deliver signals where conventional radio and television signals can't, don't or won't reach.

The future is moving forward regardless of protectionist policies by the government or dinosaur industries grasping for life trying to adjust to a new paradigm.

Nurture new technology. Wake up or the future and your careers will pass you by.

regards,

David Thomas Golden
